## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of group I, claims 1-6 and 8 in the reply filed on April 11, 2007 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 6, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Kaita *et al.* (WO 00/52062; equivalent U.S. 7,196,031 relied upon for translation).

Kaita *et al.* teaches a catalyst composition comprising a metallocene-type complex of a rare earth metal such as samarium, an ionic compound composed of a non-coordinating anion and a cation and aluminoxane for producing high *cis*-1,4-polybutadiene (abstract). Other embodiments of the invention are described in the specification. Aluminoxanes produced by using a mixture of Me<sub>3</sub>Al and *i*Bu<sub>3</sub>Al may be suitably used (in this case, two types of group III compounds are present), and aluminoxanes may be used in combination with ionic compounds (col. 7, lines 21-24). The catalyst may further contain organometallic compounds selected from organic aluminum compounds (*i*Bu<sub>3</sub>Al, Me<sub>3</sub>Al, Et<sub>3</sub>Al) and hydrogenated organometallic compounds (Et<sub>2</sub>AlH); see col. 7, lines 25-44. Two or more organometallic compounds may be used (col. 7, line 45).

Art Unit: 1713

4. Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The catalyst comprised of a metallocene-type rare earth metal compound, aluminoxane,  $i\text{Bu}_3\text{Al}$ , and  $i\text{Bu}_2\text{AlH}$  is not disclosed or made obvious in the cited reference.
